Linkedin Profile · Portfolio Website

Computer Programming graduate experienced in full-stack development, process automation, and Linux-based system management. Focused on solving complex operational challenges through robust software and hardware solutions.

## PROFESSIONAL EXPERIENCE

### Swift Marine International Logistics
**November 2025 - Present**

**Logistics Operations Associate**

- End-to-End Logistics & Operations: Managed end-to-end supply chain processes for critical vessel spare parts, coordinating global suppliers and local/international shipping agencies from warehouse receipt to on-board delivery.
- Cost Analysis & Financial Control: Collected carrier quotes for cost analysis and competitive client proposals, while performing final invoicing, cost control, and P&L analysis for file closures.
- Process Automation: Leveraged software development skills to build applications that automated manual operational processes, boosting overall team efficiency and saving time.
- Client Management & Business Development: Held strategic and operational meetings with shipowner clients to drive process improvements and pursue new business development opportunities.

### New Mind Information Management Systems
**September 2024 - August 2025**

**Full-Stack Web Developer**

- Full-Stack Development & Product Lifecycle: Engineered a data-driven web application using React, Express, Prisma, MongoDB, and PostgreSQL, maintaining continuous development cycles to transition the project into a scalable product.
- Database & Infrastructure Optimization: Optimized MongoDB and PostgreSQL performance through efficient queries and indexing strategies, while configuring Docker environments to ensure seamless deployment on remote servers.
- Cross-Project Engineering & Agile Workflow: Led debugging and feature development across diverse Node.js codebases, utilizing Azure DevOps for sprint management and GitLab for robust version control.
- Feature Innovation & Cross-Functional Collaboration: Partnered closely with team members to pitch, design, and integrate strategic new features aligned with product roadmaps.

**Web Developer Long-Term Intern** **February 2024 - August 2024**

- Worked on web applications designed to streamline legal processes for lawyers.
- Enhanced team communication skills by working collaboratively with Frontend, Backend, and other departments.
- Experienced software development processes firsthand through practical application of Sprint and Scrum concepts.

### Interdisciplinary Brain Research Association
**November 2023 - January 2025**

**Social Media Manager**

- Designed posts and event posters for the association's educational programs across all social media accounts.
- Moderated educational sessions hosted by the association.
- Handled long-form video shooting, editing, and sound design for the association's YouTube channel.

### Freelance
**May 2021 - April 2022**

**Cryptocurrency & Website Developer**

- Wrote contract codes for multiple successful cryptocurrencies on the BNB Smart Chain.
- Researched trending cryptocurrency themes and features, integrating these technologies to develop successful tokens.
- Moderated Telegram, Reddit, and various social platforms for my own projects as well as other cryptocurrencies.
